## **DETAILED ACTION**

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-18 and 38-46, drawn to a system for making a wavefront aberrator, classified in class 359, subclass 237.
  - II. Claims 19-25, drawn to a wavefront aberrator, classified in class 428, subclass332.
  - III. Claims 26-37, drawn to a method for making a wavefront aberrator, classified in class 156, subclass 60.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case the wavefront aberrator could be made by an apparatus comprising a conveyor for transporting a first transparent cover to a first location, wherein the first location includes a device for applying a first resin in a first subregion of the first transparent cover and a second device for applying a second resin to a second subregion of the first transparent cover, the second resin having a different refractive index than the first resin; the conveyor also transports the coated first transparent cover to a second location if the apparatus where a second transparent cover is applied to the resin coated side of the first

Art Unit: 1775

transparent cover; and the conveyor finally transports the assembly to a final location which includes a source that cures the resins.

- 3. Inventions II and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the wavefront aberrator could be made by a process comprising applying two resins to two different subregions of a first transparent cover, wherein the two resin have different refractive indices; providing a second transparent cover to the resin coated side of the first transparent cover; and curing the resins.
- 4. Inventions I and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed could be used to cure the adhesive of a tamper evident device (hologram).
- 5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
